Connect & Go Commercial – DIRECT

Control and power devices for up to 3 pump sets with direct start devices and control for the compensation tank. The panel includes analog inputs, control of motorized valves in the suction battery and control devices for lighting.

• 3 filter pumps (triphasic).

• 1 lighting control.

• 1 auxiliary output. (max 10A).

• Minimum level of the compensation deposit.

• Fill level of the compensation tank.

• Maximum level of the compensation deposit.

• 24 VAC filling valve transformer.

• 3 control of the valves of the suction pumps.

• 3 pump control switches M-0-A.

• 1 M-0-A lighting switch.

• 1 0-A filling switch.

• Real energy / Reactive energy / Apparent energy meter.

• 4 analog inputs (4-20 mA).

• 3 digital inputs to control the status of the filtration pump.

• 3 digital inputs to control the motor circuit breakers.

• 3 digital inputs to control the limit switch.

• 2 digital inputs to control the maximum and minimum levels of the compensation tank.

• 2 digital inputs for pulsed water meters.

• 3 digital inputs available.

• 4 digital outputs available (max. 2 A).

BASIC

Easy and practical installation for a smart connected pool.

We offer a series of Connect & Go control center cabinets to fit most residential pool configurations.

The Connect & Go control center cabinets contain the electrical protections and switches necessary

to manage the pool equipment. Everything is pre-wired to facilitate the installation process, making it the perfect solution for new pools, but it can also be used to upgrade installations (just replace the entire cabinet with Connect & Go).

The Connect & Go Basic cabinet contains the control and power devices for a single-phase pump and lighting control devices.

• IP-65 protection. Two transparent lids with lock and key.

• The products are compatible with 220/240V 1-phase (P+N+T) 50 Hz/60Hz.

• Internet connection is required.

• Manual (selector) or automatic control of lighting and pump.

• Includes Connect Box and 1 wired GPIO.

• Allows the connection of an optional temperature sensor (code 69682) without the need for accessories.

• Possibility of connecting a level box.

• For lighting requires an external transformer.

• White, RGB or GPIO lighting expansion modules can be connected.

70875	Basic D	

Basic Plus

Easy and practical installation for a smart connected pool. We offer a series of Connect & Go control center cabinets to fit most residential pool configurations. The Connect & Go control center cabinets contain the electrical protections and switches necessary to manage the pool equipment. Everything is pre-wired to facilitate the installation process, making it the perfect solution for new pools, but it can also be used to upgrade installations (just replace the entire cabinet with Connect & Go).

The Connect & Go Basic Plus cabinet contains the control and power devices for a single-phase pump plus a device and control devices for lighting.

• IP-65 protection. Two transparent lids with lock and key.

• The products are compatible with 220/240V 1-phase (P+N+T) 50 Hz/60Hz.

• Internet connection is required.

• Manual (selector) or automatic control of lighting, pump and auxiliary device.

• Includes Connect Box and 1 wired GPIO.

• Allows the connection of an optional temperature sensor (code 69682) without the need for accessories.

• Possibility of connecting a level box.

• For lighting requires an external transformer.

• White, RGB or GPIO lighting expansion modules can be connected.

Net'N'Clean

Easy and practical installation for a smart connected pool.

We offer a series of Connect & Go control center cabinets to fit most residential pool configurations. The Connect & Go control center cabinets contain the electrical protections and switches necessary to manage the pool equipment. Everything is pre-wired to facilitate the installation process, making it the perfect solution for new pools, but it can also be used to upgrade installations (just replace the entire cabinet with Connect & Go).

The Connect & Go Net'N'Clean cabinet contains the control and power devices for two single-phase pumps plus one device.

• IP-65 protection. Two transparent lids with lock and key.

• The products are compatible with 220/240V 1-phase (P+N+T) 50 Hz/60Hz.

• Internet connection is required.

• Manual (selector) or automatic control of the pump, auxiliary pump and auxiliary device.

• Includes Connect Box and 1 wired GPIO.

• Allows the connection of an optional temperature sensor (code 69682) without the need for accessories.

• Possibility of connecting a level box.

• For lighting requires an external transformer.

• White, RGB or GPIO lighting expansion modules can be connected.

Complete White

Easy and practical installation for a smart connected pool.

We offer a series of Connect & Go control center cabinets to fit most residential pool configurations. The Connect & Go control center cabinets contain the electrical protections and switches necessary to manage the pool equipment. Everything is pre-wired to facilitate the installation process, making it the perfect solution for new pools, but it can also be used to upgrade installations (just replace the entire cabinet with Connect & Go).

The Connect & Go Complete White cabinet contains the control and power devices for two single-phase pumps plus one device and control and power devices for white lighting.

• IP-65 protection. Three transparent lids with lock and key.

• The products are compatible with 220/240V 1-phase (P+N+T) 50 Hz/60Hz.

• Internet connection is required.

• Manual (selector) or automatic control of pump, auxiliary pump, auxiliary device and lighting.

• Includes Connect Box and 1 wired GPIO.

• Allows the connection of an optional temperature sensor (code 69682) without the need for accessories.

• Possibility of connecting a level box.

• For lighting includes a 100VA transformer.

• You can connect lighting, RGB or GPIO expansion modules.

Complete RGB

Easy and practical installation for a smart connected pool.

We offer a series of Connect & Go control center cabinets to fit most residential pool configurations. The Connect & Go control center cabinets contain the electrical protections and switches necessary to manage the pool equipment. Everything is pre-wired to facilitate the installation process, making it the perfect solution for new pools, but it can also be used to upgrade installations (just replace the entire cabinet with Connect & Go).

The Connect & Go Complete RGB cabinet contains the control and power devices for two single-phase pumps plus one device and control and power devices for RGB lighting.

• IP-65 protection. Three transparent lids with lock and key.

• The products are compatible with 220/240V 1-phase (P+N+T) 50 Hz/60Hz.

• Internet connection is required.

• Manual (selector) or automatic control of pump, auxiliary pump, auxiliary device and RGB lighting.

• Includes Connect Box and 1 wired GPIO.

• Allows the connection of an optional temperature sensor (code 69682) without the need for accessories.

• Possibility of connecting a level box.

• For lighting includes a 100VA transformer.

• You can connect white lighting or GPIO expansion modules.

Connect & Go Commercial – EASY

Control and power devices for up to 3 pump sets with direct start devices and control

for the compensation tank. The panel includes control devices for lighting.

• 3 filter pumps (triphasic).

• 1 lighting control.

• Minimum level of the compensation deposit.

• Fill level of the compensation tank.

• Maximum level of the compensation deposit.

• 24 VAC filling valve transformer.

• 3 pump control switches M-0-A.

• 1 M-0-A lighting switch.

• 1 0-A filling switch.

• 1 digital input to control the state of the filtration.

• 1 digital input to control the motor circuit breakers.

• 2 digital inputs to control the maximum and minimum levels of the compensation tank.

CODE	Description	spare parts

72271	Easy (3CV)	

Connect & Go Commercial – SMART

Control and power devices for up to 3 pump sets with soft start devices and control for the compensation tank. The panel includes analog inputs, control of motorized valves in the suction battery and lighting control devices.

• 3 filter pumps (triphasic).

• 1 lighting control.

• 1 auxiliary output. (max 10A).

• Minimum level of the compensation deposit.

• Fill level of the compensation tank.

• Maximum level of the compensation deposit.

• 24 VAC filling valve transformer.

• 3 control of the valves of the suction pumps.

• 3 M-0-A control pump switches.

• 1 M-0-A lighting switch.

• 1 0-A filling switch.

• Real energy / Reactive energy / Apparent energy meter.

• 4 analog inputs (4-20 mA).

• 3 digital inputs to control the status of the filtration pump.

• 3 digital inputs to control the motor circuit breakers.

• 3 digital inputs to control the limit switch.

• 2 digital inputs to control the maximum and minimum levels of the compensation tank.

• 2 digital inputs for pulsed water meters.

• 3 digital inputs available.

• 4 digital outputs available (max. 2 A).

Armarios de filtración conectados

• Armario de maniobra conectado para 1 bomba de filtración e iluminación subacuática. Modelo compacto.

• Protección de sobrecarga térmica para la bomba. Disponible en tipo C (4-6,3 A) y tipo D (6-10 A).

• Transformador de 100 W o 300 W para la iluminación (en función del modelo).

• Interruptores de tres posiciones (control de la aplicación / apagado / encendido) para permitir el control

manual de seguridad.

• Relé inteligente de canal doble que permite gestionar la bomba y la iluminación con la aplicación

iAquaLink®+ a través de Bluetooth.

• Programación semanal ampliada de la bomba y la iluminación en la aplicación.

• Selección y programación del color y la secuencia de las LED (compatible con las luces LED

LumiPlus

RGB de AstralPool y NL de Zodiac).
